Summary

Software Engineering student (UCalgary, graduating Apr 2027) who builds data systems and production software: pipelines processing 100k+ financial records at a chartered accounting firm, an agentic decision-support system for satellite-based grazing analytics, and a live multi-user platform shipped by a 6-person team in 10 weeks. Core stack: Python, SQL, TypeScript, React/Next.js, Power BI, Azure.

Work Experience

Junior IT Consultant – Hoda Vasi Chowdhury & Co. (Chartered Accountants) *May 2025 – Aug 2025*

- Engineered end-to-end pipelines in Power Automate and Power Query to ingest, validate, and process 100k+ financial records, reducing data preparation time by 40–60% with modular design and full traceability to source records.
- Built automated reporting in Power BI and SharePoint, delivering audit-ready outputs with documented specifications and stakeholder sign-off.

Client Services Supervisor – University of Calgary (Active Living) *Oct 2025 – Present*

- Supervise day-to-day client service operations in a high-volume campus recreation environment; maintain operational systems in SharePoint and implement process improvements.

Data Analyst – AC Robotics (Student Engineering Club) *Sep 2021 – Apr 2022*

- Built SQL-based storage and analytics workflows for robotics sensor data, standardized across cross-functional engineering teams with full traceability to source data.
- Automated diagnostics and system-health reporting with PowerShell and Python scripts, improving data logging efficiency and testing reliability.

Projects

Grazing Intelligence Agent – Agrivanna Inc. (Capstone) [[site](#)] *Python, LLM Tool-Calling — Sep 2026 – Apr 2027*

- Building an agentic system that ingests satellite (Sentinel-2 NDVI), weather (ERA5-Land, CHIRPS), and soil moisture (SMAP) layers and returns ranked grazing recommendations with cause attribution and confidence scoring.
- Separates weather-driven from management-driven pasture decline by benchmarking each paddock against its 10-year normal, with cloud masking, gap-filling, and explicit “insufficient data” output.

Hive – Roommate Management Platform [[live](#)] *Next.js, React, TypeScript, Supabase, PostgreSQL, Docker*

- Led frontend and backend API development and set up Docker infrastructure on a 6-person team that shipped a live SaaS platform in 10 weeks with real-time multi-user state.
- Extended the platform to iOS/Android with Capacitor, wrapping the web codebase into a native mobile shell.

Cloud Value Optimizer [[GitHub: github](#)] *R, Power BI, Azure Retail Prices API — Dec 2025 – Feb 2026*

- Built an automated pipeline pulling real-time pricing for 59+ Azure VM instances; applied log-log regression ($R^2 = 0.70$) in R to surface cost optimization opportunities in Power BI dashboards.

Automated Audit Sampling Tool [[GitHub: github](#)] *Python, Pandas, Streamlit — Jan 2026 – Present*

- Modular Python pipeline for stratified sampling of 10k–50k+ record populations with a self-adjusting high-value threshold, documented with functional specifications and test cases.

AuditEdge – Audit Workflow Platform [[live](#)] *Next.js, TypeScript, Supabase, PostgreSQL*

- Building a SaaS platform for audit execution: trial balance mapping, risk assessment, misstatement tracking, and sign-off workflows with a full audit trail.

Education

University of Calgary – Bachelor of Science in Software Engineering *Expected Apr 2027*

Coursework: Software Architecture, Software Design, Software Testing & Reliability, Database Systems, Operating Systems, Networked Systems, Embedded Systems, Scalable Data Analytics, Machine Learning Systems, Software Project Management, Engineering Economics

Certifications & Activities

[Deloitte Data Analytics Job Simulation](#) (Forage, 2026) · [Career Essentials in Data Analysis](#) (Microsoft & LinkedIn, 2026) · First Aid CPR/AED

UCalgary Solar Car Team – Visual Effects Artist (2024–25) · UCalgary Intramural Sports

Skills

Languages	Python, SQL, TypeScript, JavaScript, C#, C++, R, PowerShell
Web & Backend	React, Next.js, Flask, REST APIs, Supabase, PostgreSQL, Docker, Capacitor, Git
Data & Cloud	Pandas, NumPy, Power BI, Power Query, Power Automate, Azure, Vercel, SharePoint
AI & Practices	LLM tool-calling, agentic systems, geospatial data, Agile delivery, technical documentation
